

ERO VITECO CANE PRUNER

INNOVATION FOR GROWTH.

ERO VITECO CANE PRUNER

The ERO Viteco Cane Pruner raises the movable lifting wire and the fruiting wires on the machine side of the trellis, and guides them to the mulcher-head. All the canes & material which is attached to the wires by tendrils and ties is shredded as it passes through the mulcher and spread in the vineyard. The wires leave the Viteco almost entirely free of shoots, tendrils and canes.

STANDARD EQUIPMENT AND FEATURES:

- ERO Viteco Cane Pruner work-head with hydraulic adjustment on two axes:
 - Side tilting of the unit through 20° to the right and 30° to the left make it easy the thread and align the work-head
 - Inclination of the complete work-head through 30° to the front or rear to compensate for gradients in the vineyard
- ERO Viteco Cane Pruner lift arm:
 - Simple to install on an existing ERO tractor bracket
 - With a maximum lift height of 2m, the ERO Viteco Cane Pruner is also especially well-suited to high cordons
 - Hydraulic, parallel guiding of the work-head during raising and lowering simplifies alignment and permits trouble-free position correction while in operation
 - The new lift design ensures favourable weight distribution
 - The hydraulic parallel shift, 40cm to both right and left, provides free access to the tractor's engine compartment
- ERO Viteco Cane Pruner hydraulic unit with tandem pump:
 - 74 L/min + 36 L/min oil flow rates at 540 rpm PTO shaft speed
 - Guarantees hydraulic functions under any load situation
 - Individually adjustable oil flow to supply the mulcher
 - Hydraulic oil capacity: 200L
 - Multi-functional application options to relieve the tractor hydraulics on units with a high power requirement.
- ERO Comfort Controller with joystick operation:
 - Comfortable operation of five double-acting cylinder functions and two single-acting functions for feed unit and mulcher
 - Direction of feed wheel rotation can be reversed from the driver's seat to clear blockages quickly
